

— WHAT WE CAN DO

Bring us the drawing. We bring it to tolerance.

CNC-Turkey coordinates precision turning, milling, multi-axis and 5-axis machining across a qualified Istanbul supplier network — from first RFQ to inspected, export-ready parts.

— CAPABILITIES

Four ways we put metal on your drawing

Every job starts the same way — with your drawing, not a fixed machine spec. The route is chosen to fit the part.

01

CNC Turning

Shafts, flanges, bushings, couplers and bodies — planned around geometry and workholding, with C/Y-axis and sub-spindle options evaluated where the part calls for them.

- Carbon & alloy steel, stainless, aluminium, nickel alloys
 - Single-setup machining where geometry allows
 - Cylindrical grinding for tight-tolerance fits
-

02

CNC Milling

Prismatic bodies, brackets, plates and fixture components — drilling, tapping, pocketing and contour work reviewed against your GD&T callouts.

- Machine bodies, housings, structural carriers
- Flatness, perpendicularity, positional tolerance
- Grinding & post-hardening machining available

03

Multi-Task Turn-Mill

Turning and milling completed in a single setup — fewer re-fixtures, tighter position tolerance between faces, shorter cycle for complex parts.

- C/Y/B-axis and sub-spindle on suitable machines
 - Axial holes, slot-bore and angled features
 - Not forced on parts that don't need it
-

04

5-Axis Machining

Complex geometry and multi-face access, confirmed against the drawing before the route or machine is chosen — not assumed by default.

- Complex contours & multi-face parts
 - Route confirmed before quotation
 - Sourced through the qualified network
-

— PROOF, NOT PROMISES

Recent projects, anonymized

Customer names, drawings and commercially sensitive pricing stay confidential — the coordination approach doesn't.

INDUSTRIAL · EUROPE

Complex turned coupler components

SCOPE

Three component sizes, alloy steel, repeat-production potential

PROCESS

CNC turning, drawing-based process planning

DOCUMENTATION

Agreed material certificate & inspection requirements

LOGISTICS

Export shipment to Europe

ELECTRONICS · EUROPE

Aluminium brackets & heatsink components

SCOPE

Prototype/sample phase moving to repeat-order planning

PROCESS

Aluminium CNC milling, repeat-production planning

DOCUMENTATION

Drawing revision, first-batch inspection

LOGISTICS

Customer-arranged DHL pickup

INDUSTRIAL · AUSTRALIA

Hardened pins & collet-type components

SCOPE

Alloy steel, heat treatment, grinding, repeat orders

PROCESS

CNC machining, heat-treatment & grinding coordination

DOCUMENTATION

EN 10204 3.1 material documentation where required

LOGISTICS

Export to Australia

Series-produced flanges, ready for inspection

Ground & hardened pins

Packed for export

— WHERE IT'S USED

Sectors, not a single niche

Project review runs on material, geometry and documentation scope — not the industry name alone. Aerospace, defence, medical or nuclear requests are reviewed case by case, only where certification requirements can be met.

Industrial machinery

Textile machinery

Hydraulic systems

Automation equipment

Tooling & fixtures

Automotive supply

Energy equipment

Heavy-equipment spares

— HOW IT RUNS

Drawing in, parts out – five steps

01

Send the drawing

PDF, STEP, IGES, DXF or DWG — material, quantity and tolerances noted.

02

Technical review

Manufacturing route confirmed. First response within 2 business days.

03

Production

Turning, milling, heat treatment and coating coordinated as required.

04

Inspection

Dimensional check, FAI, EN 10204 3.1 certificates where agreed.

05

Export

EXW, FCA, DAP or CIF/CFR — documentation and freight coordinated.
